

Spacy language Detection

- This library come up with ready to fit pipeline with high accuracy and speed.
- I have used spacy small model to predict various sentences and paragraphs in different language and this model gave result with more than 98% accuracy with high speed.
- Only limitation of using this library is this model unable to predict two language or more which could be problematic if any customer at drive-thru speaking more than one language.
- The solution lies into another framework released by Facebook name FastText.
