

Fasttext Language Detection

- With solving previous spacy model's weakness this library helps with detecting language with high accuracy.
- I have used "[lid.176.bin](#)" version of fasttext to detect language.
- This library can detect multiple language which at some extent solve problem with multiple language speaker at drive-thru
- This language has limitation with detecting single token with accuracy which comple me to use ANN (Artificial Neural Netwok) with web scrapping approach.
